*Current susceptibility testing guidelines suggest no ‘sensitive’ category for colistin. Isolates are either intermediate or resistant. Percent resistance rates for colistin are: *Acinetobacter* 4.2; *E.coli* 2.7; *Klebsiella* spp 18; *Enterobacter* spp 10.4; and 1.2 for *P.aeruginosa* in 2023. †Reported for urinary isolates only

Note: Susceptibility profiles are derived from all specimens received by the Clinical Microbiology Laboratory.
Antibiotic susceptibilities of bacteria recovered from specific wards or populations may differ.
